SonicWALL Network Security Appliances

Getting Started Guide
SonicWALL NSA 2400 Getting Started Guide

This *Getting Started Guide* provides instructions for basic installation and configuration of the SonicWALL Network Security Appliance (NSA) 2400 running SonicOS Enhanced. After you complete this guide, computers on your Local Area Network (LAN) will have secure Internet access.

**Document Contents**

This document contains the following sections:

1. *Pre-Configuration Tasks* - page 3
2. *Registering Your Appliance on MySonicWALL* - page 9
3. *Deployment Scenarios* - page 15
4. *Additional Deployment Configuration* - page 37
5. *Support and Training Options* - page 59
SonicWALL NSA 2400 Physical Characteristics

<tr>
<td>Voltage</td>
<td>1 Amp / 50-60Hz</td>
</tr>
</tbody>
</table>

Note: Always observe proper safety and regulatory guidelines when removing administrator-serviceable parts from the SonicWALL NSA appliance. Proper guidelines can be found in the Safety and Regulatory Information section, on page 68 of this guide.
In this Section:

This section provides pre-configuration information. Review this section before setting up your SonicWALL NSA 2400 appliance.

- Check Package Contents - page 4
- Obtain Configuration Information - page 5
- The Front Panel - page 6
- The Back Panel - page 7
Check Package Contents

Before setting up your SonicWALL NSA appliance, verify that your package contains the following parts:

1. NSA 2400 Appliance
2. DB9 -> RJ45 (CLI) Cable
3. Standard Power Cord*
4. Ethernet Cable
5. Red Crossover Cable
6. Release Notes
7. Global Support Services Guide
8. Getting Started Guide
9. Rack Mount Kit **

Any Items Missing?
If any items are missing from your package, please contact SonicWALL support.

A listing of the most current support documents are available online at: <http://www.sonicwall.com/us/support.html>

*The included power cord is intended for use in North America only. For European Union (EU) customers, a power cord is not included.
**This item is not included in the below illustration.
Obtain Configuration Information

Please record and keep for future reference the following setup information:

Registration Information

<table>
<thead>
<tr>
<th>Serial Number:</th>
<th>Record the serial number found on the bottom panel of your SonicWALL appliance.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Authentication Code:</td>
<td>Record the authentication code found on the bottom panel of your SonicWALL appliance.</td>
</tr>
</tbody>
</table>

Networking Information

<table>
<thead>
<tr>
<th>LAN IP Address:</th>
<th>Select a static IP address for your SonicWALL appliance that is within the range of your local subnet. If you are unsure, you can use the default IP address (192.168.168.168).</th>
</tr>
</thead>
<tbody>
<tr>
<td>Subnet Mask:</td>
<td>Record the subnet mask for the local subnet where you are installing your SonicWALL appliance.</td>
</tr>
<tr>
<td>Ethernet WAN IP Address:</td>
<td>Select a static IP address for your Ethernet WAN. This setting only applies if you are already using an ISP that assigns a static IP address.</td>
</tr>
</tbody>
</table>

If you connect using DHCP

No information is usually required: Some providers may require a Host name: ________________

If you connect using Static IP

| IP Address: | ________________ |
| Subnet Mask: | ________________ |
| Default Gateway: | ________________ |
| Primary DNS: | ________________ |
| DNS 2 (optional): | ________________ |
| DNS 3 (optional): | ________________ |

Administrator Information

| Admin Name: | Select an administrator account name. (default is admin) |
| Admin Password: | Select an administrator password. (default is password) |

Obtain Internet Service Provider (ISP) Information

Record the following information about your current Internet service:

<table>
<thead>
<tr>
<th>If you connect using</th>
<th>Please record</th>
</tr>
</thead>
<tbody>
<tr>
<td>DHCP</td>
<td>No information is usually required: Some providers may require a Host name: ________________</td>
</tr>

Registering Your Appliance on MySonicWALL

In this Section:

This section provides instructions for registering your SonicWALL NSA 2400 appliance.

- Before You Register - page 10
- Creating a MySonicWALL Account - page 11
- Registering and Licensing Your Appliance on MySonicWALL - page 11
- Licensing Security Services and Software - page 12
- Registering a Second Appliance as a Backup - page 14
- Registration Next Steps - page 14

Note: Registration is an important part of the setup process and is necessary in order to receive the benefits of SonicWALL security services, firmware updates, and technical support.
Before You Register

You need a MySonicWALL account to register the SonicWALL NSA appliance. You can create a new MySonicWALL account on [www.mysonicwall.com](http://www.mysonicwall.com) or directly from the SonicWALL management interface. This section describes how to create an account by using the Web site.

If you already have a MySonicWALL account, go to Registering and Licensing Your Appliance on MySonicWALL - page 11 to register your appliance on MySonicWALL. You can also postpone registration until after having set up the appliance. Skip ahead to Deployment Scenarios - page 15 and register your appliance directly from the management interface once you reach Accessing the Management Interface - page 22.

Note: For a High Availability configuration, you must use MySonicWALL to associate a backup unit that can share the Security Services licenses with your primary SonicWALL.

If you do not yet have a MySonicWALL account, you can use MySonicWALL to register your SonicWALL appliance and activate or purchase licenses for Security Services, ViewPoint Reporting and other services, support, or software before you even connect your device. This method allows you to prepare for your deployment before making any changes to your existing network.

Note: Your SonicWALL NSA appliance does not need to be powered on during account creation or during the MySonicWALL registration and licensing process.

Note: After registering a new SonicWALL appliance on MySonicWALL, you must also register the appliance from the SonicOS management interface. This allows the unit to synchronize with the SonicWALL License Server and to share licenses with the associated appliance, if any. See Accessing the Management Interface - page 22.
Creating a MySonicWALL Account

To create a MySonicWALL account, perform the following steps:

1. In your browser, navigate to www.mysonicwall.com.
2. In the login screen, click If you are not a registered user, Click here.
3. Complete the Registration form and then click Register.
4. Verify that the information is correct and then click Submit.
5. In the screen confirming that your account was created, click Continue.

Registering and Licensing Your Appliance on MySonicWALL

This section contains the following subsections:

- Product Registration - page 11
- Licensing Security Services and Software - page 12
- Registering a Second Appliance as a Backup - page 14

Product Registration

You must register your SonicWALL security appliance on MySonicWALL to enable full functionality.

1. Login to your MySonicWALL account. If you do not have an account, you can create one at www.mysonicwall.com.
2. On the main page, in the Register A Product field, type the appliance serial number and then click Next.
3. On the My Products page, under Add New Product, type the friendly name for the appliance, select the Product Group if any, type the authentication code into the appropriate text boxes, and then click Register.
4. On the Product Survey page, fill in the requested information and then click Continue.
Licensing Security Services and Software

The Service Management - Associated Products page in MySonicWALL lists security services, support options, and software such as ViewPoint that you can purchase or try with a free trial. For details, click the Info button. Your current licenses are indicated in the Status column with either a license key or an expiration date. You can purchase additional services now or at a later time.

The following products and services are available for the SonicWALL NSA 2400:

- **Service Bundles:**
  - Client/Server Anti-Virus Suite
  - Comprehensive Gateway Security Suite

- **Gateway Services:**
  - Gateway Anti-Virus, Anti-Spyware, Intrusion Prevention, Application Firewall
  - Global Management System
  - Content Filtering: Premium Edition
  - Stateful High Availability Upgrade

- **Desktop and Server Software:**
  - Enforced Client Anti-Virus and Anti-Spyware
  - Global VPN Client
  - Global VPN Client Enterprise
  - ViewPoint

- **Support Services:**
  - Dynamic Support 8x5
  - Dynamic Support 24x7
  - Software and Firmware Updates
To manage your licenses, perform the following tasks:

1. In the MySonicWALL Service Management - Associated Products page, check the Applicable Services table for services that your SonicWALL appliance is already licensed for. Your initial purchase may have included security services or other software bundled with the appliance. These licenses are enabled on MySonicWALL when the SonicWALL appliance is delivered to you.

2. If you purchased a service subscription or upgrade from a sales representative separately, you will have an Activation Key for the product. This key is emailed to you after online purchases, or is on the front of the certificate that was included with your purchase. Locate the product on the Service Management page and click Enter Key in that row.

3. In the Activate Service page, type or paste your key into the Activation Key field and then click Submit. Depending on the product, you will see an expiration date or a license key string in the Status column when you return to the Service Management page.

4. To license a product of service, do one of the following:
   - To try a Free Trial of a service, click Try in the Service Management page. A 30-day free trial is immediately activated. The Status page displays relevant information including the activation status, expiration date, number of licenses, and links to installation instructions or other documentation. The Service Management page is also updated to show the status of the free trial.
   - To purchase a product or service, click Buy Now.

5. In the Buy Service page, type the number of licenses you want in the Quantity column for either the 1 year, 2 year, or 3 year license row and then click Add to Cart.

6. In the Checkout page, follow the instructions to complete your purchase.

The MySonicWALL server will generate a license key for the product. The key is added to the license keyset. You can use the license keyset to manually apply all active licenses to your SonicWALL appliance.

For more information, see Registration Next Steps - page 14.
Registering a Second Appliance as a Backup

To ensure that your network stays protected if your SonicWALL appliance has an unexpected failure, you can purchase a license to associate a second SonicWALL of the same model as the first in a high availability (HA) pair. You can purchase the license associate the two appliances as part of the registration process on MySonicWALL. The second SonicWALL will automatically share the Security Services licenses of the primary appliance.

To register a second appliance and associate it with the primary, perform the following steps:

1. Login to your MySonicWALL account.
2. On the main page, in the Register A Product field, type the appliance serial number and then click Next.
3. On the My Products page, under Add New Product, type the friendly name for the appliance, select the Product Group if any, type the authentication code into the appropriate text boxes, and then click Register.
4. On the Product Survey page, fill in the requested information and then click Continue. The Create Association Page is displayed.
5. On the Create Association Page, click the radio button to select the primary unit for this association, and then click Continue. The screen only displays units that are not already associated with other appliances.
6. On the Service Management - Associated Products page, scroll down to the Associated Products section to verify that your product registered successfully. You should see the HA Primary unit listed in the Parent Product section, as well as a Status value of 0 in the Associated Products / Child Product Type section.
7. Although the Stateful High Availability Upgrade and all the Security Services licenses can be shared with the HA Primary unit, you must purchase a separate ViewPoint license for the backup unit. This will ensure that you do not miss any reporting data in the event of a failover. Under Desktop & Server Software, click Buy Now for ViewPoint. Follow the instructions to complete the purchase.

To return to the Service Management - Associated Products page, click the serial number link for this appliance.

Registration Next Steps

Your SonicWALL NSA 2400 HA Pair is now registered and licensed on MySonicWALL. To complete the registration process in SonicOS and for more information, see:

- Accessing the Management Interface - page 22
- Activating Licenses in SonicOS - page 24
- Enabling Security Services in SonicOS - page 44
- Applying Security Services to Network Zones - page 48
In this Section:

This section provides detailed overviews of advanced deployment scenarios as well as configuration instructions for connecting your SonicWALL NSA 2400.

- Selecting a Deployment Scenario - page 16
  - Scenario A: NAT/Route Mode Gateway - page 17
  - Scenario B: State Sync Pair in NAT/Route Mode - page 18
  - Scenario C: L2 Bridge Mode - page 19
- Initial Setup - page 20
- Upgrading Firmware on Your SonicWALL - page 25
- Configuring a State Sync Pair in NAT/Route Mode - page 28
- Configuring L2 Bridge Mode - page 35

Tip: Before completing this section, fill out the information in Obtain Configuration Information - page 5. You will need to enter this information during the Setup Wizard.
**Selecting a Deployment Scenario**

Before continuing, select a deployment scenario that best fits your network scheme. Reference the table below and the diagrams on the following pages for help in choosing a scenario.

<table>
<thead>
<tr>
<th>Current Gateway Configuration</th>
<th>New Gateway Configuration</th>
<th>Use Scenario</th>
</tr>
</thead>
<tbody>
<tr>
<td>No gateway appliance</td>
<td>Single SonicWALL NSA as a primary gateway.</td>
<td>A - NAT/Route Mode Gateway</td>
</tr>
<tr>
<td></td>
<td>Pair of SonicWALL NSA appliances for high availability.</td>
<td>B - NAT with State Sync Pair</td>
</tr>
<tr>
<td>Existing Internet gateway appliance</td>
<td>SonicWALL NSA as replacement for an existing gateway appliance.</td>
<td>A - NAT/Route Mode Gateway</td>
</tr>
<tr>
<td></td>
<td>SonicWALL NSA in addition to an existing gateway appliance.</td>
<td>C - Layer 2 Bridge Mode</td>
</tr>
<tr>
<td>Existing SonicWALL gateway appliance</td>
<td>SonicWALL NSA in addition to an existing SonicWALL gateway appliance.</td>
<td>B - NAT with State Sync Pair</td>
</tr>
</tbody>
</table>

**Scenario A: NAT/Route Mode Gateway** - page 17  
**Scenario B: State Sync Pair in NAT/Route Mode** - page 18  
**Scenario C: L2 Bridge Mode** - page 19
Scenario A: NAT/Route Mode Gateway

For new network installations or installations where the SonicWALL NSA 2400 is replacing the existing network gateway.

In this scenario, the SonicWALL NSA 2400 is configured in NAT/Route mode to operate as a single network gateway. Two Internet sources may be routed through the SonicWALL appliance for load balancing and failover purposes. Because only a single SonicWALL appliance is deployed, the added benefits of high availability with a stateful synchronized pair are not available.

To set up this scenario, follow the steps covered in Initial Setup - page 20. If you have completed setup procedures in that section, continue to Additional Deployment Configuration - page 37 to complete configuration.
Scenario B: State Sync Pair in NAT/Route Mode

For network installations with two SonicWALL NSA 2400 appliances configured as a stateful synchronized pair for redundant high-availability networking.

In this scenario, one SonicWALL NSA 2400 operates as the primary gateway device and the other SonicWALL NSA 2400 is in passive mode. All network connection information is synchronized between the two devices so that the backup appliance can seamlessly switch to active mode without dropping any connections if the primary device loses connectivity.

To set up this scenario, follow the steps covered in the Initial Setup - page 20 and the Configuring a State Sync Pair in NAT/Route Mode - page 28 sections. If you have completed setup procedures in those sections, continue to the Additional Deployment Configuration - page 37 to complete configuration.
Scenario C: L2 Bridge Mode

For network installations where the SonicWALL NSA 2400 is running in tandem with an existing network gateway.

In this scenario, the original gateway is maintained. The SonicWALL NSA 2400 is integrated seamlessly into the existing network, providing the benefits of deep packet inspection and comprehensive security services on all network traffic.

L2 Bridge Mode employs a secure learning bridge architecture, enabling it to pass and inspect traffic types that cannot be handled by many other methods of transparent security appliance integration. Using L2 Bridge Mode, a SonicWALL security appliance can be non-disruptively added to any Ethernet network to provide in-line deep-packet inspection for all traversing IPv4 TCP and UDP traffic. L2 Bridge Mode can pass all traffic types, including IEEE 802.1Q VLANs, Spanning Tree Protocol, multicast, broadcast and IPv6.

To set up this scenario, follow the steps covered in the Initial Setup - page 20 and the Configuring L2 Bridge Mode - page 35 sections. If you have completed setup procedures in those sections, continue to the Additional Deployment Configuration - page 37 to complete configuration.
Initial Setup

This section provides initial configuration instructions for connecting your SonicWALL NSA 2400. Follow these steps if you are setting up scenario A, B, or C.

This section contains the following subsections:

- System Requirements - page 20
- Connecting the WAN Port - page 20
- Connecting the LAN Port - page 21
- Applying Power - page 21
- Accessing the Management Interface - page 22
- Using the Setup Wizard - page 22
- Connecting to Your Network - page 23
- Testing Your Connection - page 23
- Activating Licenses in SonicOS - page 24
- Upgrading Firmware on Your SonicWALL - page 25

System Requirements

Before you begin the setup process, check to verify that you have:

- An Internet connection
- A Web browser supporting Java Script and HTTP uploads

<table>
<thead>
<tr>
<th>Accepted Browser</th>
<th>Browser Version Number</th>
</tr>
</thead>
<tbody>
<tr>
<td>Internet Explorer</td>
<td>6.0 or higher</td>
</tr>
<tr>
<td>Firefox</td>
<td>2.0 or higher</td>
</tr>
<tr>
<td>Netscape</td>
<td>9.0 or higher</td>
</tr>
<tr>
<td>Opera</td>
<td>9.10 or higher for Windows</td>
</tr>
<tr>
<td>Safari</td>
<td>2.0 or higher for MacOS</td>
</tr>
</tbody>
</table>

Connecting the WAN Port

1. Connect one end of an Ethernet cable to your Internet connection.
2. Connect the other end of the cable to the X1 (WAN) port on your SonicWALL NSA Series appliance.
Connecting the LAN Port
1. Connect one end of the provided Ethernet cable to the computer you are using to manage the SonicWALL NSA Series.
2. Connect the other end of the cable to the X0 port on your SonicWALL NSA Series.
   The Link LED above the X0 (LAN) port will light up in green or amber depending on the link throughput speed, indicating an active connection:
   - Amber indicates 1 Gbps
   - Green indicates 100 Mbps
   - Unlit while the right (activity) LED is illuminated indicates 10 Mbps

Applying Power
1. Plug the power cord into an appropriate power outlet.
2. Turn on the power switch on the rear of the appliance next to the power cords.

The Power LED️ on the front panel lights up blue when you plug in the SonicWALL NSA. The Alarm️ LED may light up and the Test️ LED will light up and may blink while the appliance performs a series of diagnostic tests.

When the Power LEDs are lit and the Test LED is no longer lit, the SonicWALL NSA is ready for configuration. This typically occurs within a few minutes of applying power to the appliance.

Note: If the Test or Alarm LEDs remain lit after the SonicWALL NSA appliance has been booted, restart the appliance by cycling power.
Accessing the Management Interface

The computer you use to manage the SonicWALL NSA Series must be set up to have an unused IP address on the 192.168.168.x/24 subnet, such as 192.168.168.20.

To access the SonicOS Enhanced Web-based management interface:
1. Start your Web browser.

   **Note:** Disable pop-up blocking software or add the management IP address http://192.168.168.168 to your pop-up blocker’s allow list.

2. Enter http://192.168.168.168 (the default LAN management IP address) in the Location or Address field.
3. The SonicWALL Setup Wizard launches and guides you through the configuration and setup of your SonicWALL NSA appliance.

   The Setup Wizard launches only upon initial loading of the SonicWALL NSA management interface.
4. Follow the on-screen prompts to complete the Setup Wizard.

Depending on the changes made during your setup configuration, the SonicWALL may restart.

Using the Setup Wizard

If you cannot connect to the SonicWALL NSA appliance or the Setup Wizard does not display, verify the following configurations:

- Did you correctly enter the management IP address in your Web browser?
- Are the Local Area Connection settings on your computer set to use DHCP or set to a static IP address on the 192.168.168.x/24 subnet?
- Do you have the Ethernet cable connected to your computer and to the X0 (LAN) port on your SonicWALL?
- Is the connector clip on your network cable properly seated in the port of the security appliance?
- Some browsers may not launch the Setup Wizard automatically. In this case:
  - Log into SonicWALL NSA appliance using “admin” as the user name and “password” as the password.
  - Click the Wizards button on the System > Status page.
  - Select Setup Wizard and click Next to launch the Setup Wizard.
  - Some pop-up blockers may prevent the launch of the Setup Wizard. You can temporarily disable your pop-up blocker, or add the management IP address of your SonicWALL (192.168.168.168 by default) to your pop-up blocker’s allow list.
Connecting to Your Network

The SonicWALL NSA 2400 ships with the internal DHCP server active on the LAN port. However, if a DHCP server is already active on your LAN, the SonicWALL will disable its own DHCP server to prevent conflicts.

Ports X1 and X0 are preconfigured as WAN and LAN. The remaining ports (X2-X5) can be configured to meet the needs of your network. As an example, zones in the example above are configured as:

- X1: WAN
- X2: LAN
- X3: WLAN
- X5: DMZ

Testing Your Connection

1. After you exit the Setup Wizard, the login page reappears. Log back into the Management Interface and verify your IP and WAN connection.
2. Ping a host on the Internet, such as sonicwall.com.

If you can view the SonicWALL home page, you have configured your SonicWALL NSA appliance correctly.

If you cannot view the SonicWALL home page, renew your management station DHCP address.
4. If you still cannot view a Web page, try one of these solutions:
   - **Restart your Management Station** to accept new network settings from the DHCP server in the SonicWALL security appliance.
   - **Restart your Internet Router** to communicate with the DHCP Client in the SonicWALL security appliance.
Activating Licenses in SonicOS

After completing the registration process in SonicOS, you must perform the following tasks to activate your licenses and enable your licensed services from within the SonicOS user interface:

- Activate licenses
- Enable security services
- Apply services to network zones

This section describes how to activate your licenses. For instructions on how to enable security services and apply services to network zones, see the following sections:

- Enabling Security Services in SonicOS - page 44
- Applying Security Services to Network Zones - page 48

To activate licensed services in SonicOS, you can enter the license keyset manually, or you can synchronize all licenses at once with MySonicWALL.

The Setup Wizard automatically synchronizes all licenses with MySonicWALL if the appliance has Internet access during initial setup. If initial setup is already complete, you can synchronize licenses from the System > Licenses page.

Manual upgrade using the license keyset is useful when your appliance is not connected to the Internet. The license keyset includes all license keys for services or software enabled on MySonicWALL. It is available on <http://www.sonicwall.com> at the top of the Service Management page for your SonicWALL NSA appliance.

To activate licenses in SonicOS:

1. Navigate to the System > Licenses page.
2. Under Manage Security Services Online do one of the following:
   - Enter your MySonicWALL credentials, then click the Synchronize button to synchronize licenses with MySonicWALL.
   - Paste the license keyset into the Manual Upgrade Keyset field.
3. Click Submit.
Upgrading Firmware on Your SonicWALL

The following procedures are for upgrading an existing SonicOS Enhanced image to a newer version:

- Obtaining the Latest Firmware - page 25
- Saving a Backup Copy of Your Preferences - page 25
- Upgrading the Firmware with Current Settings - page 26
- Upgrading the Firmware with Factory Defaults - page 26
- Using SafeMode to Upgrade Firmware - page 26

Obtaining the Latest Firmware

1. To obtain a new SonicOS Enhanced firmware image file for your SonicWALL security appliance, connect to your MySonicWALL account at <http://www.mysonicwall.com>.
2. Copy the new SonicOS Enhanced image file to a convenient location on your management station.

Saving a Backup Copy of Your Preferences

Before beginning the update process, make a system backup of your SonicWALL security appliance configuration settings. The backup feature saves a copy of the current configuration settings on your SonicWALL security appliance, protecting all your existing settings in the event that it becomes necessary to return to a previous configuration state. The System Backup shows you the current configuration and firmware in a single, clickable restore image.

In addition to using the backup feature to save your current configuration state to the SonicWALL security appliance, you can export the configuration preferences file to a directory on your local management station. This file serves as an external backup of the configuration preferences, and can be imported back into the SonicWALL security appliance.

Perform the following procedures to save a backup of your configuration settings and export them to a file on your local management station:

1. On the System > Settings page, click Create Backup. Your configuration preferences are saved. The System Backup entry is displayed in the Firmware Management table.
2. To export your settings to a local file, click Export Settings. A popup window displays the name of the saved file.
Upgrading the Firmware with Current Settings

Perform the following steps to upload new firmware to your SonicWALL appliance and use your current configuration settings upon startup.

Tip: The appliance must be properly registered before it can be upgraded. Refer to Registering and Licensing Your Appliance on MySonicWALL - page 11 for more information.

1. Download the SonicOS Enhanced firmware image file from MySonicWALL and save it to a location on your local computer.
3. Browse to the location where you saved the SonicOS Enhanced firmware image file, select the file and click the Upload button.
4. On the System > Settings page, click the Boot icon in the row for Uploaded Firmware.
5. In the confirmation dialog box, click OK. The SonicWALL restarts and then displays the login page.
6. Enter your user name and password. Your new SonicOS Enhanced image version information is listed on the System > Settings page.

Upgrading the Firmware with Factory Defaults

Perform the following steps to upload new firmware to your SonicWALL appliance and start it up using the default configuration:

1. Download the SonicOS Enhanced firmware image file from MySonicWALL and save it to a location on your local computer.
2. On the System > Settings page, click Create Backup.
3. Click Upload New Firmware.
4. Browse to the location where you saved the SonicOS Enhanced firmware image file, select the file and click the Upload button.
5. On the System > Settings page, click the Boot icon in the row for Uploaded Firmware with Factory Default Settings.
6. In the confirmation dialog box, click OK. The SonicWALL restarts and then displays the login page.
7. Enter the default user name and password (admin/password) to access the SonicWALL management interface.

Using SafeMode to Upgrade Firmware

If you are unable to connect to the SonicWALL security appliance’s management interface, you can restart the SonicWALL security appliance in SafeMode. The SafeMode feature allows you to recover quickly from uncertain configuration states with a simplified management interface that includes the same settings available on the System > Settings page.
To use SafeMode to upgrade firmware on the SonicWALL security appliance, perform the following steps:

1. Connect your computer to the X0 port on the SonicWALL appliance and configure your IP address with an address on the 192.168.168.0/24 subnet, such as 192.168.168.20.

2. To configure the appliance in SafeMode, perform one of the following:
   - Use a narrow, straight object, like a straightened paper clip or a toothpick, to press and hold the reset button on the front of the security appliance for one second. The reset button is in a small hole next to the USB ports.
   - The Test light starts blinking when the SonicWALL security appliance has rebooted into SafeMode.

4. If you have made any configuration changes to the security appliance, select the Create Backup On Next Boot checkbox to make a backup copy of your current settings. Your settings will be saved when the appliance restarts.

5. Click Upload New Firmware, and then browse to the location where you saved the SonicOS Enhanced firmware image, select the file and click the Upload button.

6. Select the boot icon in the row for one of the following:
   - **Uploaded Firmware - New!**
     Use this option to restart the appliance with your current configuration settings.
   - **Uploaded Firmware with Factory Defaults - New!**
     Use this option to restart the appliance with default configuration settings.

7. In the confirmation dialog box, click OK to proceed.

8. After successfully booting the firmware, the login screen is displayed. If you booted with factory default settings, enter the default user name and password (admin / password) to access the SonicWALL management interface.

Configuring a State Sync Pair in NAT/Route Mode

This section provides instructions for configuring a pair of SonicWALL NSA appliances for high availability (HA). This section is relevant to administrators following deployment scenario B.

This section contains the following subsections:

- Initial High Availability Setup - page 28
- Configuring High Availability - page 29
- Configuring Advanced HA Settings - page 29
- Synchronizing Settings - page 31
- Synchronizing Firmware - page 32
- Configuring HA License Overview - page 33
- Associating Pre-Registered Appliances - page 34

Initial High Availability Setup

Before you begin the configuration of HA on the Primary SonicWALL security appliance, perform the following setup:

1. On the back panel of the Backup SonicWALL security appliance, locate the serial number and write the number down. You need to enter this number in the High Availability > Settings page.
2. Verify that the Primary SonicWALL and Backup SonicWALL security appliances are registered, running the same SonicOS Enhanced versions, and running the same SonicWALL Security services.
3. Make sure the Primary SonicWALL and Backup SonicWALL security appliances’ LAN, WAN and other interfaces are properly configured for failover.
4. Connect the X5 ports on the Primary SonicWALL and Backup SonicWALL appliances with a CAT6-rated crossover cable (red crossover cable). The Primary and Backup SonicWALL security appliances must have a dedicated connection. SonicWALL recommends cross-connecting the two together using a CAT 6 crossover Ethernet cable, but a connection using a dedicated 100Mbps hub/switch is also valid.
5. Power up the Primary SonicWALL security appliance, and then power up the Backup SonicWALL security appliance.
6. Do not make any configuration changes to the Primary’s X5; the High Availability configuration in an upcoming step takes care of this issue. When done, disconnect the workstation.
Configuring High Availability

The first task in setting up HA after initial setup is configuring the **High Availability > Settings** page on the Primary SonicWALL security appliance. Once you configure HA on the Primary SonicWALL security appliance, it communicates the settings to the Backup SonicWALL security appliance.

To configure HA on the Primary SonicWALL, perform the following steps:

1. Navigate to the **High Availability > Settings** page.
2. Select the **Enable High Availability** checkbox.
3. Under **SonicWALL Address Settings**, type in the serial number for the Backup SonicWALL appliance. You can find the serial number on the back of the SonicWALL security appliance, or in the **System > Status** screen of the backup unit. The serial number for the Primary SonicWALL is automatically populated.
4. Click **Apply** to retain these settings.

Configuring Advanced HA Settings

1. Navigate to the **High Availability > Advanced** page.
2. To configure Stateful HA, select **Enable Stateful Synchronization**. A dialog box is displayed with recommended settings for the **Heartbeat Interval** and **Probe Interval** fields. The settings it shows are minimum recommended values. Lower values may cause unnecessary failovers, especially when the SonicWALL is under a heavy load. You can use higher values if your SonicWALL handles a lot of network traffic. Click **OK**.

**Tip:** Preempt mode is automatically disabled after enabling Stateful Synchronization. This is because preempt mode can be over-aggressive about failing over to the backup appliance. For example if both devices are idle, preempt mode may prompt a failover.

3. To backup the firmware and settings when you upgrade the firmware version, select **Generate/Overwrite Backup Firmware and Settings When Upgrading Firmware**.
4. Select the **Enable Virtual MAC** checkbox. Virtual MAC allows the Primary and Backup appliances to share a single MAC address. This greatly simplifies the process of updating network ARP tables and caches when a failover occurs. Only the WAN switch to which the two appliances are connected to needs to be notified. All outside devices will continue to route to the single shared MAC address.
5. The **Heartbeat Interval** controls how often the two units communicate. The default is 5000 milliseconds; the minimum recommended value is 1000 milliseconds. Less than this may cause unnecessary failovers, especially when the SonicWALL is under a heavy load.

6. Typically, SonicWALL recommends leaving the **Heartbeat Interval**, **Election Delay Time (seconds)**, and **Dynamic Route Hold-Down Time** fields to their default settings. These fields can be tuned later as necessary for your specific network environment:
   - The **Failover Trigger Level** sets the number of heartbeats that can be missed before failing over. By default, this is set to 5 missed heartbeats.
   - The **Election Delay Time** is the number of seconds allowed for internal processing between the two units in the HA pair before one of them takes the primary role.
   - The **Probe Level** sets the interval in seconds between communication with upstream or downstream systems. The default is 20 seconds, and the allowed range is 5 to 255 seconds. You can set the Probe IP Address(es) on the **High Availability > Monitoring** screen.
   - The **Dynamic Route Hold-Down Time** setting is used when a failover occurs on a HA pair that is using either RIP or OSPF dynamic routing, and it is only displayed when the **Advanced Routing** option is selected on the **Network > Routing** page. When a failover occurs, **Dynamic Route Hold-Down Time** is the number of seconds the newly-active appliance keeps the dynamic routes it had previously learned in its route table.

   - During this time, the newly-active appliance relearns the dynamic routes in the network. When the **Dynamic Route Hold-Down Time** duration expires, it deletes the old routes and implements the new routes it has learned from RIP or OSPF. The default value is 45 seconds. In large or complex networks, a larger value may improve network stability during a failover.

7. Select the **Include Certificates/Keys** checkbox to have the appliances synchronize all certificates and keys.

8. Click **Synchronize Settings** to synchronize the settings between the Primary and Backup appliances.

9. Click **Synchronize Firmware** if you previously uploaded new firmware to your Primary unit while the Secondary unit was offline, and it is now online and ready to upgrade to the new firmware. **Synchronize Firmware** is typically used after taking your Secondary appliance offline while you test a new firmware version on the Primary unit before upgrading both units to it.

10. Click **Apply** to retain the settings on this screen.
Synchronizing Settings

Once you have configured the HA setting on the Primary SonicWALL security appliance, click the Synchronize Settings button. You should see a HA Peer Firewall has been updated message at the bottom of the management interface page. Also note that the management interface displays Logged Into: Primary SonicWALL Status: (green ball) Active in the upper-right-hand corner.

By default, the Include Certificate/Keys setting is enabled. This specifies that certificates, certificate revocation lists (CRL) and associated settings (such as CRL auto-import URLs and OCSP settings) are synchronized between the Primary and Backup units. When local certificates are copied to the Backup unit, the associated private keys are also copied. Because the connection between the Primary and Backup units is typically protected, this is generally not a security concern.

Tip: A compromise between the convenience of synchronizing certificates and the added security of not synchronizing certificates is to temporarily enable the Include Certificate/Keys setting and manually synchronize the settings, and then disable Include Certificate/Keys.

To verify that Primary and Backup SonicWALL security appliances are functioning correctly, wait a few minutes, then trigger a test failover by logging into the Primary unit and doing a restart. The Backup SonicWALL security appliance should quickly take over.

From your management workstation, test connectivity through the Backup SonicWALL by accessing a site on the public Internet – note that the Backup SonicWALL, when active, assumes the complete identity of the Primary, including its IP addresses and Ethernet MAC addresses.

Log into the Backup SonicWALL’s unique LAN IP address. The management interface should now display Logged Into: Backup SonicWALL Status: (green ball) Active in the upper-right-hand corner.

Now, power the Primary SonicWALL back on, wait a few minutes, then log back into the management interface. If stateful synchronization is enabled (automatically disabling preempt mode), the management GUI should still display Logged Into: Backup SonicWALL Status: (green ball) Active in the upper-right-hand corner.

If you are using the Monitor Interfaces feature, experiment with disconnecting each monitored link to ensure correct configuration.
Synchronizing Firmware

Selecting the Synchronize Firmware Upload and Reboot checkbox allows the Primary and Backup SonicWALL security appliances in HA mode to have firmware uploaded on both devices at once, in staggered sequence to ensure that security is always maintained. During the firmware upload and reboot, you are notified via a message dialog box that the firmware is loaded on the Backup SonicWALL security appliance, and then the Primary SonicWALL security appliance. You initiate this process by clicking on the Synchronize Firmware button.
Configuring HA License Overview

You can configure HA license synchronization by associating two SonicWALL security appliances as HA Primary and HA Secondary on MySonicWALL. Note that the Backup appliance of your HA pair is referred to as the HA Secondary unit on MySonicWALL.

You must purchase a single set of security services licenses for the HA Primary appliance. To use Stateful HA, you must first activate the Stateful High Availability Upgrade license for the primary unit in SonicOS. This is automatic if your appliance is connected to the Internet. See Registering and Licensing Your Appliance on MySonicWALL - page 11.

License synchronization is used during HA so that the Backup appliance can maintain the same level of network protection provided before the failover. To enable HA, you can use the SonicOS UI to configure your two appliances as a HA pair in Active/Idle mode.

MySonicWALL provides several methods of associating the two appliances. You can start by registering a new appliance, and then choosing an already-registered unit to associate it with. You can associate two units that are both already registered. Or, you can select a registered unit and then add a new appliance with which to associate it.

Note: After registering new SonicWALL appliances on MySonicWALL, you must also register each appliance from the SonicOS management interface by clicking the registration link on the System > Status page. This allows each unit to synchronize with the SonicWALL license server and share licenses with the associated appliance.
**Associating Pre-Registered Appliances**

To associate two already-registered SonicWALL security appliances so that they can use HA license synchronization, perform the following steps:

1. Login to MySonicWALL.
2. In the left navigation bar, click **My Products**.
3. On the My Products page, under Registered Products, scroll down to find the appliance that you want to use as the parent, or primary, unit. Click the product **name** or **serial number**.
5. Under Associated Products, click **HA Secondary**.
6. On the My Product - Associated Products page, in the text boxes under Associate New Products, type the **serial number** and the friendly **name** of the appliance that you want to associate as the child/secondary/backup unit.
7. Select the group from the **Product Group** drop-down list. The product group setting specifies the MySonicWALL users who can upgrade or modify the appliance.
8. Click **Register**.

Configuring L2 Bridge Mode

This section provides instructions to configure the SonicWALL NSA appliance in tandem with an existing Internet gateway device. This section is relevant to users following deployment scenario C.

This section contains the following subsections:

- **Connection Overview** - page 35
- **Configuring the Primary Bridge Interface** - page 35
- **Configuring the Secondary Bridge Interface** - page 36

**Connection Overview**

Connect the X1 port on your SonicWALL NSA 2400 to the LAN port on your existing Internet gateway device. Then connect the X0 port on your SonicWALL to your LAN.

**Configuring the Primary Bridge Interface**

The primary bridge interface is your existing Internet gateway device. The only step involved in setting up your primary bridge interface is to ensure that the WAN interface is configured for a static IP address. You will need this static IP address when configuring the secondary bridge.

**Note:** The primary bridge interface must have a static IP assignment.
Configuring the Secondary Bridge Interface

Complete the following steps to configure the SonicWALL appliance:

1. Navigate to Network > Interfaces.
2. Click the Configure icon in the right column of the X0 (LAN) interface.
3. In the IP Assignment drop-down list, select Layer 2 Bridged Mode.
4. In the Bridged to drop-down list, select the X1 interface.
5. Configure management options (HTTP, HTTPS, Ping, SNMP, SSH, User logins, or HTTP redirects).

**Note:** Do not enable Never route traffic on the bridge-pair unless your network topology requires that all packets entering the L2 Bridge remain on the L2 Bridge segments.

You may optionally enable the Block all non-IPv4 traffic setting to prevent the L2 bridge from passing non-IPv4 traffic.

</tr>
</tbody>
</table>
In this Section:

This section provides basic configuration information to begin building network security policies for your deployment. This section also contains several SonicOS diagnostic tools and a deployment configuration reference checklist.

- Creating Network Access Rules - page 38
- Creating a NAT Policy - page 40
  - Creating Address Objects - page 42
  - Configuring NAT Policies - page 43
- Enabling Security Services in SonicOS - page 44
- Applying Security Services to Network Zones - page 48
- Deploying SonicPoints for Wireless Access - page 49
- Troubleshooting Diagnostic Tools - page 54
- Deployment Configuration Reference Checklist - page 58
Creating Network Access Rules

A Zone is a logical grouping of one or more interfaces designed to make management, such as the definition and application of access rules, a simpler and more intuitive process than following a strict physical interface scheme.

By default, the SonicWALL security appliance’s stateful packet inspection allows all communication from the LAN to the Internet, and blocks all traffic from the Internet to the LAN. The following behaviors are defined by the “Default” stateful inspection packet access rule enabled in the SonicWALL security appliance:

<table>
<thead>
<tr>
<th>Originating Zone</th>
<th>Destination Zone</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>LAN, WLAN</td>
<td>WAN, DMZ</td>
<td>Allow</td>
</tr>
<tr>
<td>DMZ</td>
<td>WAN</td>
<td>Allow</td>
</tr>
<tr>
<td>WAN</td>
<td>DMZ</td>
<td>Deny</td>
</tr>
<tr>
<td>WAN and DMZ</td>
<td>LAN or WLAN</td>
<td>Deny</td>
</tr>
</tbody>
</table>

To create an access rule:
1. On the Firewall > Access Rules page in the matrix view, select two zones that will be bridged by this new rule.

The access rules are sorted from the most specific at the top to the least specific at the bottom of the table. At the bottom of the table is the Any rule.
3. In the Add Rule page in the **General** tab, select **Allow** or **Deny** or **Discard** from the **Action** list to permit or block IP traffic.

- Select the service or group of services affected by the access rule from the **Service** drop-down list. If the service is not listed, you must define the service in the **Add Service** window. Select **Create New Service** or **Create New Group** to display the **Add Service** window or **Add Service Group** window.
- Select the source of the traffic affected by the access rule from the **Source** drop-down list. Selecting **Create New Network** displays the **Add Address Object** window.
- Select the destination of the traffic affected by the access rule from the **Destination** drop-down list. Selecting **Create New Network** displays the **Add Address Object** window.
- Select a user or user group from the **Users Allowed** drop-down list.
- Select a schedule from the **Schedule** drop-down list. The default schedule is **Always on**.
- Enter any comments to help identify the access rule in the **Comments** field.
4. Click on the **Advanced** tab.

![Advanced Settings](image)

- In the **TCP Connection Inactivity Timeout (minutes)** field, set the length of TCP inactivity after which the access rule will time out. The default value is **15** minutes.
- In the **UDP Connection Inactivity Timeout (seconds)** field, set the length of UDP inactivity after which the access rule will time out. The default value is **30** minutes.
- In the **Number of connections allowed (% of maximum connections)** field, specify the percentage of maximum connections that is allowed by this access rule. The default is **100%**.
- Select **Create a reflexive rule** to create a matching access rule for the opposite direction, that is, from your destination back to your source.

5. Click on the **QoS** tab to apply DSCP or 802.1p Quality of Service coloring/marking to traffic governed by this rule. See the *SonicOS Enhanced Administrator’s Guide* for more information on managing QoS marking in access rules.

6. Click **OK** to add the rule.

### Creating a NAT Policy

The Network Address Translation (NAT) engine in SonicOS Enhanced allows users to define granular NAT policies for their incoming and outgoing traffic. By default, the SonicWALL security appliance has a preconfigured NAT policy to perform Many-to-One NAT between the systems on the LAN and the IP address of the WAN interface. The appliance does not perform NAT by default when traffic crosses between the other interfaces.

You can create multiple NAT policies on a SonicWALL running SonicOS Enhanced for the same object – for instance, you can specify that an internal server uses one IP address when accessing Telnet servers, and uses a different IP address for all other protocols. Because the NAT engine in SonicOS Enhanced supports inbound port forwarding, it is possible to access multiple internal servers from the WAN IP address of the SonicWALL security appliance. The more granular the NAT Policy, the more precedence it takes.

Before configuring NAT Policies, you must create all Address Objects that will be referenced by the policy. For instance, if you are creating a One-to-One NAT policy, first create Address Objects for your public and private IP addresses.
Address Objects are one of four object classes (Address, User, Service and Schedule) in SonicOS Enhanced. Once you define an Address Object, it becomes available for use wherever applicable throughout the SonicOS management interface. For example, consider an internal Web server with an IP address of 67.115.118.80. Rather than repeatedly typing in the IP address when constructing Access Rules or NAT Policies, you can create an Address Object to store the Web server’s IP address. This Address Object, “My Web Server”, can then be used in any configuration screen that employs Address Objects as a defining criterion.

Since there are multiple types of network address expressions, there are currently the following Address Objects types:

- **Host** – Host Address Objects define a single host by its IP address.
- **Range** – Range Address Objects define a range of contiguous IP addresses.
- **Network** – Network Address Objects are like Range objects in that they comprise multiple hosts, but rather than being bound by specified upper and lower range delimiters, the boundaries are defined by a valid netmask.
- **MAC Address** – MAC Address Objects allow for the identification of a host by its hardware address or MAC (Media Access Control) address.
- **FQDN Address** – FQDN Address Objects allow for the identification of a host by its Fully Qualified Domain Names (FQDN), such as www.sonicwall.com.

SonicOS Enhanced provides a number of default Address Objects that cannot be modified or deleted. You can use the default Address Objects when creating a NAT policy, or you can create custom Address Objects to use. All Address Objects are available in the drop-down lists when creating a NAT policy.
Creating Address Objects

The **Network > Address Objects** page allows you to create and manage your Address Objects. You can view Address Objects in the following ways using the **View Style** menu:

- **All Address Objects** – displays all configured Address Objects.
- **Custom Address Objects** – displays Address Objects with custom properties.
- **Default Address Objects** – displays Address Objects configured by default on the SonicWALL security appliance.

To add an Address Object:

1. Navigate to the **Network > Address Objects** page.
2. Below the **Address Objects** table, click **Add**.
3. In the **Add Address Object** dialog box, enter a name for the Address Object in the **Name** field.
4. Select the zone to assign to the Address Object from the **Zone Assignment** drop-down list.
5. Select **Host, Range, Network, MAC, or FQDN** from the **Type** menu.
   - For **Host**, enter the IP address in the **IP Address** field.
   - For **Range**, enter the starting and ending IP addresses in the **Starting IP Address** and **Ending IP Address** fields.
   - For **Network**, enter the network IP address and netmask in the **Network** and **Netmask** fields.
   - For **MAC**, enter the MAC address and netmask in the **Network** and **MAC Address** field.
   - For **FQDN**, enter the domain name for the individual site or range of sites (with a wildcard) in the **FQDN** field.
6. Click **OK**.
Configuring NAT Policies

NAT policies allow you to control Network Address Translation based on matching combinations of Source IP address, Destination IP address and Destination Services. Policy-based NAT allows you to deploy different types of NAT simultaneously. The following NAT configurations are available in SonicOS Enhanced:

- Many-to-One NAT Policy
- Many-to-Many NAT Policy
- One-to-One NAT Policy for Outbound Traffic
- One-to-One NAT Policy for Inbound Traffic (Reflexive)
- One-to-Many NAT Load Balancing
- Inbound Port Address Translation via One-to-One NAT Policy
- Inbound Port Address Translation via WAN IP Address

This section describes how to configure a One-to-One NAT policy. One-to-One is the most common NAT policy used to route traffic to an internal server, such as a Web Server. Most of the time, this means that incoming requests from external IPs are translated from the IP address of the SonicWALL security appliance WAN port to the IP address of the internal web server.

An example configuration illustrates the use of the fields in the Add NAT Policy procedure. To add a One-to-One NAT policy that allows all Internet traffic to be routed through a public IP address, two policies are needed: one for the outbound traffic, and one for the inbound traffic. To add both parts of a One-to-One NAT policy, perform the following steps:

2. For Original Source, select Any.
3. For Translated Source, select Original.
4. For Original Destination, select X0 IP.
5. For Translated Destination, select Create new address object and create a new address object using WAN for Zone Assignment and Host for Type.
6. For Original Service, select HTTP.
7. For Translated Service, select Original.
8. For Inbound Interface, select X0.
9. For Outbound Interface, select Any.
10. For Comment, enter a short description.
11. Select the Enable NAT Policy checkbox.
12. Select the Create a reflexive policy checkbox if you want a matching NAT Policy to be automatically created in the opposite direction. This will create the outbound as well as the inbound policies.
13. Click OK.

For other NAT configurations, see the SonicOS Enhanced Administrator’s Guide.
Policies for subnets behind the other interfaces of the SonicWALL security appliance can be created by emulating these steps. Create a new NAT policy in which you adjust the source interface and specify the **Original Source**: the subnet behind that interface.

### Enabling Security Services in SonicOS

SonicWALL security services are key components of threat management in SonicOS. The core security services are Gateway Anti-Virus, Intrusion Prevention Services, and Anti-Spyware.

You must enable each security service individually in the SonicOS user interface. See the following procedures to enable and configure the three security services that must be enabled:

- **Enabling Gateway Anti-Virus** - page 44
- **Enabling Intrusion Prevention Services** - page 46
- **Enabling Anti-Spyware** - page 47

### Enabling Gateway Anti-Virus

To enable Gateway Anti-Virus in SonicOS:

1. Navigate to the **Security Services > Gateway Anti-Virus** page. Select the **Enable Gateway Anti-Virus** checkbox.

2. Select the **Enable Inbound Inspection** checkboxes for the protocols to inspect. By default, SonicWALL GAV inspects all inbound **HTTP**, **FTP**, **IMAP**, **SMTP** and **POP3** traffic. **CIFS/NetBIOS** can optionally be enabled to allow access to shared files. Generic **TCP Stream** can optionally be enabled to inspect all other TCP based traffic, such as non-standard ports of operation for SMTP and POP3, and IM and P2P protocols.
3. Enabling **Outbound Inspection** for SMTP scans mail for viruses before it is delivered to an internally hosted SMTP server.

4. For each protocol you can restrict the transfer of files with specific attributes by clicking on the **Settings** button under the protocol. In the Settings dialog box, you can configure the following:
   - **Restrict Transfer of password-protected Zip files** - Disables the transfer of password protected ZIP files over any enabled protocol. This option only functions on protocols that are enabled for inspection.
   - **Restrict Transfer of MS-Office type files containing macros (VBA 5 and above)** - Disables the transfers of any MS Office files that contain VBA macros.
   - **Restrict Transfer of packed executable files (UPX, FSG, etc.)** - Disables the transfer of packed executable files. Packers are utilities that compress and encrypt executables. Although there are legitimate applications for these, they can be used with the intent of obfuscation, and can make the executables less detectable by anti-virus applications. The packer adds a header that expands the file in memory, and then executes that file. SonicWALL Gateway Anti-Virus currently recognizes the most common packed formats: UPX, FSG, PKLite32, Petite, and A SPack. SonicWALL periodic GAV updates provide additional recognized packed formats as they become available.

5. Click **Configure Gateway AV Settings**. The **Gateway AV Settings** window allows you to configure clientless notification alerts and create a SonicWALL GAV exclusion list.

6. Select the **Disable SMTP Responses** box to suppress the sending of email messages to clients from SonicWALL GAV when a virus is detected in an email or attachment.

7. Select **Enable HTTP Clientless Notification Alerts** and customize the message to be displayed when GAV detects a threat from the HTTP server.
8. Select **Enable Gateway AV Exclusion List** and then click **Add** to define a range of IP addresses whose traffic will be excluded from SonicWALL GAV scanning.

9. When finished in the Add GAV Range dialog box, click **OK**.

10. In the Gateway AV Config View window, click **OK**.

11. In the **Security Services > Gateway Anti-Virus** page, click **Accept**.

**Enabling Intrusion Prevention Services**

To enable Intrusion Prevention Services in SonicOS:

1. Navigate to the **Security Services > Intrusion Prevention** page. Select the **Enable Intrusion Prevention** checkbox.

2. In the Signature Groups table, select the **Prevent All** and **Detect All** checkboxes for each attack priority that you want to prevent. Selecting the **Prevent All** and **Detect All** check boxes for **High Priority Attacks** and **Medium Priority Attacks** protects your network against the most dangerous and disruptive attacks.

3. To log all detected attacks, leave the **Log Redundancy Filter** field set to zero. To enforce a delay between log entries for detections of the same attack, enter the number of seconds to delay.

4. Click **Configure IPS Settings** to enable IP packet reassembly before inspection and create a SonicWALL IPS exclusion list.

5. In the IPS Config View window, select **Enable IPS Exclusion List** and then click **Add** to define a range of IP addresses whose traffic will be excluded from SonicWALL IPS scanning.

6. When finished in the Add IPS Range dialog box, click **OK**.

7. In the IPS Config View window, click **OK**.

8. In the **Security Services > Intrusion Prevention** page, click **Accept**.
Enabling Anti-Spyware

To enable Anti-Spyware in SonicOS:

1. Navigate to the **Security Services > Anti-Spyware** page. Select the **Enable Anti-Spyware** checkbox.

2. In the Signature Groups table, select the **Prevent All** and **Detect All** checkboxes for each spyware danger level that you want to prevent.

3. To log all spyware attacks, leave the **Log Redundancy Filter** field set to zero. To enforce a delay between log entries for detections of the same attack, enter the number of seconds to delay.

4. Click **Configure Anti-Spyware Settings** to configure clientless notification alerts and create a SonicWALL Anti-Spyware exclusion list.

5. Select the **Disable SMTP Responses** box to suppress the sending of e-mail messages to clients from SonicWALL Anti-Spyware when spyware is detected in an e-mail or attachment.

6. Select **Enable HTTP Clientless Notification Alerts** and customize the message to be displayed in the browser when SonicWALL Anti-Spyware detects a threat from the HTTP server.

7. Select **Enable Anti-Spyware Exclusion List** and then click **Add** to define a range of IP addresses whose traffic will be excluded from SonicWALL Anti-Spyware scanning.

8. When finished in the Add Anti-Spyware Range dialog box, click **OK**.

9. In the Anti-Spyware Config View window, click **OK**.

10. Select the **Enable Inbound Inspection** checkboxes for the protocols to inspect. By default, SonicWALL GAV inspects all inbound HTTP, FTP, IMAP, SMTP and POP3 traffic.

11. Select the **Enable Inspection of Outbound Communication** checkbox to enable scanning of traffic that originates internally.

12. On the **Security Services > Anti-Spyware** page, click **Accept**.
Applying Security Services to Network Zones

A network zone is a logical group of one or more interfaces to which you can apply security rules to regulate traffic passing from one zone to another zone.

Security services such as Gateway Anti-Virus are automatically applied to the LAN and WAN network zones. To protect other zones such as the DMZ or Wireless LAN (WLAN), you must apply the security services to the network zones. For example, you can configure SonicWALL Intrusion Prevention Service for incoming and outgoing traffic on the WLAN zone to add more security for internal network traffic.

To apply services to network zones:
1. Navigate to the Network > Zones page.
2. In the Zone Settings table, click the Configure icon for the zone where you want to apply security services.
3. In the Edit Zone dialog box on the General tab, select the checkboxes for the security services to enable on this zone.
4. On the Edit Zone page, select the checkboxes for the security services that you want to enable.
5. Click OK.

6. To enable security services on other zones, repeat steps 2 through step 4 for each zone.
Deploying SonicPoints for Wireless Access

This section describes how to configure SonicPoints with the SonicWALL NSA 2400. See the following subsections:

- **Updating SonicPoint Firmware** - page 49
- **Configuring SonicPoint Provisioning Profiles** - page 49
- **Configuring a Wireless Zone** - page 51
- **Assigning an Interface to the Wireless Zone** - page 52
- **Connecting the SonicPoint** - page 53

SonicWALL SonicPoints are wireless access points specially engineered to work with SonicWALL security appliances to provide wireless access throughout your enterprise. The SonicPoint section of the SonicOS management interface lets you manage the SonicPoints connected to your system.

Before you can manage SonicPoints in the Management Interface, you must first:

- Verify that the SonicPoint image is downloaded to your SonicWALL security appliance.
- Configure your SonicPoint provisioning profiles.
- Configure a Wireless zone.
- Assign profiles to wireless zones. This step is optional. If you do not assign a default profile for a zone, SonicPoints in that zone will use the first profile in the list.
- Assign an interface to the Wireless zone.
- Attach the SonicPoints to the interface in the Wireless zone and test.

Updating SonicPoint Firmware

If your SonicWALL appliance has Internet connectivity, it will automatically download the correct version of the SonicPoint image from the SonicWALL server when you connect a SonicPoint device. Otherwise, see the *SonicOS Enhanced Administrator’s Guide* for the correct procedure.

Configuring SonicPoint Provisioning Profiles

SonicPoint Profile definitions include all of the settings that can be configured on a SonicPoint, such as radio settings for the 2.4GHz and 5GHz radios, SSID's and channels of operation.

Once you have defined a SonicPoint profile, you can apply it to a Wireless zone. Each Wireless zone can be configured with one SonicPoint profile. Any profile can apply to any number of zones. When a SonicPoint is connected to a zone, it is automatically provisioned with the profile assigned to that zone. SonicOS includes a default SonicPoint profile, named SonicPoint. You can modify this profile or create a new one.
To add a new profile, click **Add** below the list of SonicPoint provisioning profiles. To edit an existing profile, select the profile and click the **Configure** icon in the same line as the profile you are editing.

1. In the Add/Edit SonicPoint Profile window on the **General** tab:
   - Select **Enable SonicPoint**.
   - Enter a **Name Prefix** to be used as the first part of the name for each SonicPoint provisioned.
   - Select the **Country Code** for where the SonicPoints are operating.

2. In the **802.11g Radio** tab:
   - Select **Enable Radio**.
   - Select a schedule for the radio to be enabled from the drop-down list.
   - For **Radio Mode**, select the speed that the SonicPoint will operate on. You can choose from the following:
     - 11Mbps - 802.11b
     - 54 Mbps - 802.11g
     - 108 Mbps - Turbo G
     If you choose Turbo mode, all users in your company must use wireless access cards that support Turbo mode.
   - For **Channel**, use AutoChannel unless you have a reason to use or avoid specific channels.

3. In the **802.11g Adv** tab, configure the advanced radio settings for the 802.11g radio. For most 802.11g advanced options, the default settings give optimum performance. For a full description of the fields on this tab, see the *SonicOS Enhanced Administrator’s Guide*.

   - Enter a recognizable string for the **SSID** of each SonicPoint using this profile. This is the name that will appear in clients’ lists of available wireless connections.

   - **Under ACL Enforcement**, select **Enable MAC Filter List** to enforce Access Control by allowing or denying traffic from specific devices. Select a MAC address object group from the **Allow List** to automatically allow traffic from all devices with MAC addresses in the group. Select a MAC address group from the **Deny List** to automatically deny traffic from all devices with MAC addresses in the group. The Deny List is enforced before the Allow List.

   - **Under WEP/WPA Encryption**, select the **Authentication Type** for your wireless network. SonicWALL recommends using **WPA2** as the authentication type.

     **Note:** **WPA2 is a more secure replacement for the older WEP and WPA standards.**

     - Fill in the fields specific to the authentication type that you selected. The remaining fields change depending on the selected authentication type.
4. In the 802.11a Radio and 802.11a Adv tabs, configure the settings for the operation of the 802.11a radio bands. The SonicPoint has two separate radios built in. Therefore, it can send and receive on both the 802.11a and 802.11g bands at the same time. The settings in the 802.11a Radio and 802.11a Advanced tabs are similar to the settings in the 802.11g Radio and 802.11g Advanced tabs.

5. When finished, click **OK**.

### Configuring a Wireless Zone

You can configure a wireless zone on the **Network > Zones** page. Typically, you will configure the WLAN zone for use with SonicPoints.

1. On the **Network > Zones** page in the **WLAN** row, click the icon in the **Configure** column.

2. In the Edit Zone dialog box on the **General** tab, the **Allow Interface Trust** setting automates the creation of Access Rules to allow traffic to flow between the interfaces of a zone instance. For example, if the WLAN Zone has both the X2 and X3 interfaces assigned to it, checking **Allow Interface Trust** on the WLAN Zone creates the necessary Access Rules to allow hosts on these interfaces to communicate with each other.

3. Select the checkboxes for the security services to enable on this zone. Typically you would enable **Gateway Anti-Virus**, **IPS**, and **Anti-Spyware**. If your wireless clients are all running SonicWALL Client Anti-Virus, select **Enable Client AV Enforcement Service**.

4. Click the **Wireless** tab.

   - In the **Wireless Settings** section, select **Only allow traffic generated by a SonicPoint** to allow only traffic from SonicWALL SonicPoints to enter the WLAN Zone interface. This provides maximum security on your WLAN. Uncheck this option if you want to allow any traffic on your WLAN Zone regardless of whether or not it is from a SonicPoint.

   - Select **SSL VPN Enforcement** to require that all traffic that enters into the WLAN Zone be authenticated through a SonicWALL SSL VPN appliance.

   **Note:** **SSL VPN Enforcement allows the added security of one-time passwords when using a SonicWALL SSL VPN appliance.**

   - In the **SSL VPN Server** list, select an address object to direct traffic to the SonicWALL SSL VPN appliance.

   - In the **SSL VPN Service** list, select the service or group of services that you want to allow for clients authenticated through the SSL VPN.

   - If your wireless network is already running WiFiSec, you can select **WiFiSec Enforcement** to require that all traffic that enters into the WLAN Zone interface be either IPsec traffic, WPA traffic, or both.
If you have enabled WiFiSec Enforcement, you can specify the following:

- Select WiFiSec Exception Service to select services that are allowed to bypass the WiFiSec enforcement.
- Select Require WiFiSec for Site-to-Site VPN Tunnel Traversal to require WiFiSec security for all wireless connections through the WLAN zone that are part of a Site-to-Site VPN.
- If you wish to run WPA or WPA2 in addition to WiFiSec, you can select Trust WPA/WPA2 traffic as WiFiSec to accept WPA and WPA2 as allowable alternatives to WiFiSec.
- Under SonicPoint Settings, select the SonicPoint Provisioning Profile you want to apply to all SonicPoints connected to this zone. Whenever a SonicPoint connects to this zone, it will automatically be provisioned by the settings in the SonicPoint Provisioning Profile, unless you have individually configured it with different settings.

5. Optionally configure the settings on the Guest Services tab. For information about configuring Guest Services, see the SonicOS Enhanced Administrator’s Guide.

6. When finished, click OK.
Connecting the SonicPoint

When a SonicPoint unit is first connected and powered up, it will have a factory default configuration (IP Address 192.168.1.20, username: admin, password: password). Upon initializing, it will attempt to find a SonicOS device with which to peer. If it is unable to find a peer SonicOS device, it will enter into a stand-alone mode of operation with a separate stand-alone configuration allowing it to operate as a standard Access Point.

If the SonicPoint locates a peer SonicOS device via the SonicWALL Discovery Protocol, the two units perform an encrypted exchange and the profile assigned to the relevant wireless zone is used to automatically configure (provision) the newly added SonicPoint unit.

As part of the provisioning process, SonicOS assigns the discovered SonicPoint device a unique name, records the SonicPoint’s MAC address and the interface and zone on which it was discovered, and uses the profile associated with the relevant zone to configure the 2.4GHz and 5GHz radio settings. It can also automatically assign the SonicPoint an IP address, if so configured, so that the SonicPoint can communicate with an authentication server for WPA-EAP support.

To connect the SonicPoint:

1. Using a Cat-5 Ethernet cable, connect the SonicPoint to the interface that you configured. Then connect the SonicPoint to a power source.

2. In the SonicOS user interface on the SonicPoint > SonicPoints page, click the Synchronize SonicPoints button. The SonicWALL appliance downloads a SonicPoint image from the SonicWALL back-end server.

3. Follow the instructions in the SonicPoint wizard. Be sure to select the same authentication type and enter the same keys or password that you configured in SonicOS.

For more information about wireless configuration, see the SonicOS Enhanced Administrator’s Guide.
Troubleshooting Diagnostic Tools

SonicOS provides a number of diagnostic tools to help you maintain your network and troubleshoot problems. Several tools can be accessed on the System > Diagnostics page, and others are available on other screens.

This section contains the following subsections:

- Using Packet Capture - page 54
- Using Ping - page 55
- Using the Active Connections Monitor - page 56
- Using Log > View - page 57

Using Packet Capture

Packet Capture allows you to capture and examine the contents of individual data packets that traverse your SonicWALL firewall appliance. The captured packets contain both data and addressing information. The System > Packet Capture page provides a way to configure the capture criteria, display settings and file export settings, and displays the captured packets.

The Packet Capture screen has buttons for starting and stopping a packet capture. If you simply click Start without any configuration, the SonicWALL appliance will capture all packets except those for internal communication, and will stop when the buffer is full or when you click Stop.
The SonicOS user interface provides three windows to display different views of the captured packets:

- Captured Packets
- Packet Detail
- Hex Dump

Click the **Configure** button to customize the settings for the capture. Once the configuration is complete, click **Start** to begin capturing packets. The settings available in the five main areas of configuration are summarized below:

- **General** – number of bytes to capture, wrap capture buffer
- **Capture Filter** – interfaces, packet types, source/destination
- **Display Filter** – interfaces, packet types, source/destination
- **Logging** – automatic transfer of buffer to FTP server
- **Advanced** – generated packets, GMS, syslog, management

**Using Ping**

**Ping** is available on the **System > Diagnostics** page.

The **Ping** test bounces a packet off a machine on the Internet and returns it to the sender. This test shows if the SonicWALL security appliance is able to contact the remote host. If users on the LAN are having problems accessing services on the Internet, try pinging the DNS server, or another machine at the ISP location. If the test is unsuccessful, try pinging devices outside the ISP. If you can ping devices outside of the ISP, then the problem lies with the ISP connection.
Using the Active Connections Monitor

The **Active Connections Monitor** displays real-time, exportable (plain text or CSV), filterable views of all connections to and through the SonicWALL security appliance. This tool is available on the **Systems > Diagnostics** page.

You can filter the results to display only connections matching certain criteria. You can filter by **Source IP**, **Destination IP**, **Destination Port**, **Protocol**, **Src Interface** and **Dst Interface**. Enter your filter criteria in the **Active Connections Monitor Settings** table.

The fields you enter values into are combined into a search string with a logical **AND**. Select the **Group Filters** box next to any two or more criteria to combine them with a logical **OR**.

Take a deeper look: Flush active connections with the click of a button.
Using Log > View

The SonicWALL security appliance maintains an Event log for tracking potential security threats. You can view the log in the Log > View page, or it can be automatically sent to an email address for convenience and archiving. The log is displayed in a table and can be sorted by column.

You can filter the results to display only event logs matching certain criteria. You can filter by Priority, Category, Source (IP or Interface), and Destination (IP or Interface).

The fields you enter values into are combined into a search string with a logical AND. Select the Group Filters box next to any two or more criteria to combine them with a logical OR.
# Deployment Configuration Reference Checklist

Use this checklist to find more information about various deployment tasks within the *SonicOS Enhanced Administrator’s Guide*.

Customer Support

SonicWALL offers Web-based and telephone support to customers who have a valid Warranty or who purchased a Support Contract. Please review our Warranty Support Policy for product coverage. SonicWALL also offers a full range of consulting services to meet your needs, from our innovative implementation services to traditional statement of work-based services.

For further information, visit:
<http://www.sonicwall.com/us/support/contact.html>

Support Services

SonicWALL support services are designed not only to keep your security infrastructure current, but also to react swiftly to any problem that may occur. However, that is not enough to keep your network safe these days. So our support services also include crucial updates and upgrades, the finest technical support, access to extensive electronic tools and timely hardware replacement.

For further information, visit:
SonicWALL Live Product Demos

Get an interactive insight into SonicWALL security products and services with the following series of multimedia product demos:

- Unified Threat Management Platform
- Secure Cellular Wireless
- Continuous Data Protection
- SSL VPN Secure Remote Access
- Content Filtering
- Secure Wireless Solutions
- Email Security
- GMS and ViewPoint

For further information, visit:
<http://www.livedemo.sonicwall.com>

Knowledge Portal

The Knowledge Portal is a resource which allows users to search for SonicWALL documents based on the following types of search tools:

- Browse
- Search for keywords
- Full-text search

For further information, visit:
<http://www.sonicwall.com/us/support.html>
SonicOS 5.0 features a dynamic Onboard Help in the form of helpful tooltips that appear over various elements of the GUI when the mouse hovers over them. Elements that display these tooltips include: text fields, radio buttons, and checkboxes.

Tooltip display frequency can be configured from the **System > Administration** page. Select the **Enable Tooltip** checkbox to activate the Onboard Help. The **Tooltip Delay** time is a configurable value that determines how long the mouse must remain idle over a GUI element before the tooltip forms.
User Forums

The SonicWALL User Forums is a resource that provides users the ability to communicate and discuss a variety of security and appliance subject matters. In this forum, the following categories are available for users:

- Content Security Manager topics
- Continuous Data Protection topics
- Email Security topics
- Firewall topics
- Network Anti-Virus topics
- Security Services and Content Filtering topics
- GMS and Viewpoint topics
- SonicPoint and Wireless topics
- SSL VPN topics
- TZ 190 / Wireless WAN - 3G Capability topics
- VPN Client topics
- VPN site-to-site and interoperability topics

For further information, visit: <https://forum.sonicwall.com/>
Training

SonicWALL offers an extensive sales and technical training curriculum for Network Administrators, Security Experts and SonicWALL Medallion Partners who need to enhance their knowledge and maximize their investment in SonicWALL Products and Security Applications. SonicWALL Training provides the following resources for its customers:

- E-Training
- Instructor-Led Training
- Custom Training
- Technical Certification
- Authorized Training Partners

Rack Mounting the SonicWALL
The above SonicWALL appliance is designed to be mounted in a standard 19-inch rack mount cabinet. The following conditions are required for proper installation:

- Use the mounting hardware recommended by the rack manufacturer and ensure that the rack is adequate for the application.
- Four mounting screws, compatible with the rack design, must be used and hand tightened to ensure secure installation. Choose a mounting location where all four mounting holes line up with those of the mounting bars of the 19-inch rack mount cabinet.
- Mount in a location away from direct sunlight and sources of heat. A maximum ambient temperature of 104º F (40º C) is recommended.
- Route cables away from power lines, fluorescent lighting fixtures, and sources of noise such as radios, transmitters and broadband amplifiers.
- The included power cord is intended for use in North America only. For European Union (EU) customers, a power cord is not included.
- Ensure that no water or excessive moisture can enter the unit.
- Allow unrestricted airflow around the unit and through the vents on the side of the unit. A minimum of 1 inch (25.44mm) clearance is recommended.
- Mount the SonicWALL appliances evenly in the rack in order to prevent a hazardous condition caused by uneven mechanical loading.
- Consideration must be given to the connection of the equipment to the supply circuit. The effect of overloading the circuits has minimal impact on overcurrent protection and supply wiring. Appropriate consideration of equipment nameplate ratings must be used when addressing this concern.
- Reliable grounding of rack-mounted equipment must be maintained. Particular attention must be given to power supply connections other than direct connections to the branch circuits such as power strips.

Lithium Battery Warning
The Lithium Battery used in the SonicWALL Internet security appliance may not be replaced by the user. The SonicWALL must be returned to a SonicWALL authorized service center for replacement with the same or equivalent type recommended by the manufacturer. If, for any reason, the battery or SonicWALL Internet security appliance must be disposed of, do so following the battery manufacturer’s instructions.

Cable Connections
All Ethernet and RS232 (Console) cables are designed for intra-building connection to other equipment. Do not connect these ports directly to communication wiring or other wiring that exits the building where the SonicWALL is located.

**Weitere Hinweise zur Montage**

Die oben genannten SonicWALL-Modelle sind für eine Montage in einem standardmäßigen 19-Zoll-Rack konzipiert. Für eine ordnungsgemäße Montage sollten die folgenden Hinweise beachtet werden:

- Vergewissern Sie sich, dass das Rack für dieses Gerät geeignet ist und verwenden Sie das vom Rack-Hersteller empfohlene Montagezubehör.
- Verwenden Sie für eine sichere Montage vier passende Befestigungsschrauben, und ziehen Sie diese mit der Hand an.
- Wählen Sie für die Montage einen Ort, der keinem direkten Sonnenlicht ausgesetzt ist und sich nicht in der Nähe von Wärmequellen befindet. Die Umgebungstemperatur darf nicht mehr als 40 °C betragen.
- Achten Sie darauf, das sich die Netzwerkkabel nicht in der unmittelbaren Nähe von Stromleitungen, Leuchtstoffröhren und Störquellen wie Funksendern oder Breitbandverstärkern befinden.
- Stellen Sie sicher, dass das Gerät vor Wasser und hoher Luftfeuchtigkeit geschützt ist.
- Stellen Sie sicher, dass die Luft um das Gerät herum zirkulieren kann und die Lüftungsschlitze an der Seite des Gehäuses frei sind. Hier ist ein Belüftungsabstand von mindestens 26 mm einzuhalten.
- Bringen Sie die SonicWALL waagerecht im Rack an, um mögliche Gefahren durch ungleiche mechanische Belastung zu vermeiden.

- Prüfen Sie den Anschluss des Geräts an die Stromversorgung, damit der Überstromschutz sowie die elektrische Leitung nicht von einer eventuellen Überlastung der Stromversorgung beeinflusst werden. Prüfen Sie dabei sorgfältig die Angaben auf dem Aufkleber des Geräts.
- Vergewissern Sie sich, dass das Gerät sicher im Rack befestigt ist. Insbesondere muss auf nicht direkte Anschlüsse an Stromquellen geachtet werden wie z. B. bei Verwendung von Mehrfachsteckdosen.

**Hinweis zur Lithiumbatterie**

**Kabelverbindungen**

Alle Ethernet- und RS232-C-Kabel eignen sich für die Verbindung von Geräten in Innenräumen. Schließen Sie an die Anschlüsse der SonicWALL keine Kabel an, die aus dem Gebäude in dem sich das Gerät befindet, herausgeführt werden.
FCC Part 15 Class A Notice

NOTE: This equipment was tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy. And if not installed and used in accordance with the instruction manual, the device may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user is required to correct the interference at his own expense.

Complies with EN 55022 Class A and CISPR22 Class A.

Caution: Modifying this equipment or using this equipment for purposes not shown in this manual without the written consent of SonicWALL, Inc. could void the user’s authority to operate this equipment.
